

In-Line

Engineered to increase productivity
for hot fill in-mould labelling

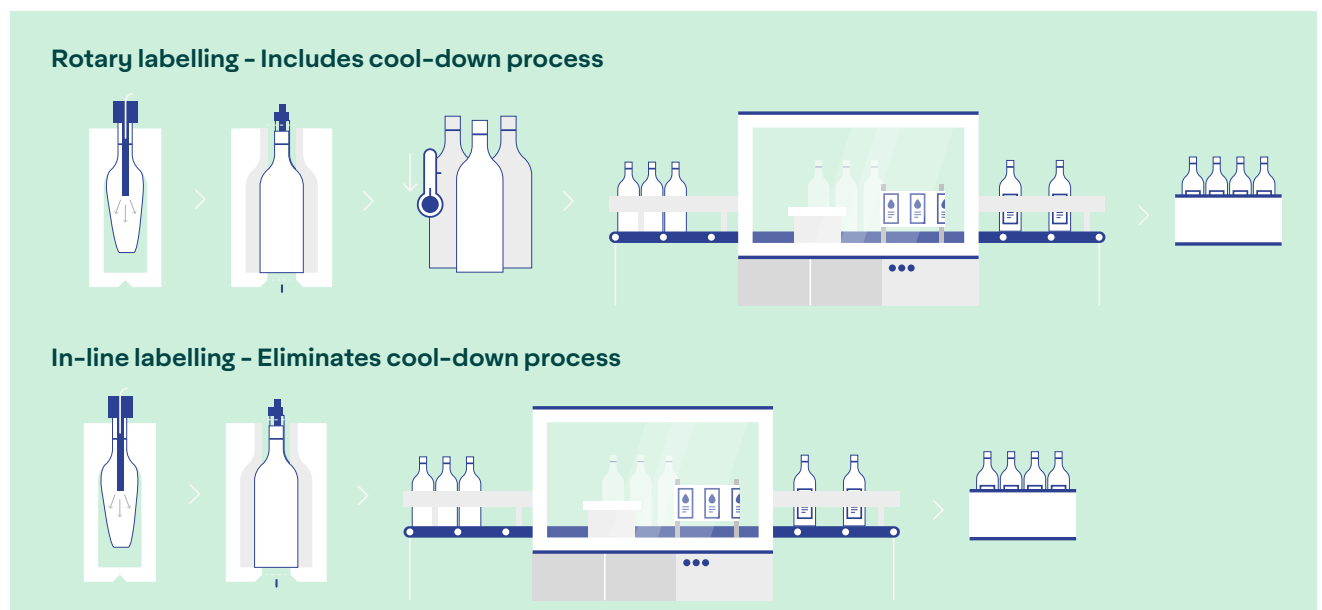

Freshly in-moulded HDPE or LDPE bottles can be a challenge when it comes to labelling as substrate temperature is relatively high and the bottles have not returned to its steady state.

Our In-line Labelling portfolio is engineered for hot-filling labelling applications, delivered in a variety of well-performing adhesive and facestock combinations.

Label with confidence

Avery Dennison's high-tack S477A.MB acrylic emulsion adhesive is designed to hold tight at temperatures of 80°C to 90°C, even on low surface-energy materials like HDPE. S477A.MB expands along with the container during hot filling, preventing pleats, wrinkles, tunnels, bubbles and edge lifts. Designed with sustainability in mind, S477A.MB contains 30% renewable materials and is APEO-free.

Facestocks as tough
as our adhesives

Choose a facestock that prints beautifully, holds up to in-line dispensing and delivers maximum shelf appeal. We offer many options to choose from, including our PE, Flex and rPP film labels.

Key features

- Contains 30% renewable materials
- Specially engineered for strong adhesion on hot fill containers with low surface energy during in-line labelling
- Expands along with container during hot-filling
- APEO-free

Application areas

Products using freshly blow-moulded containers during hot-filling process, including lubricant oils, detergent, milk bottles
