Injectable Devices

Pre-filled syringes and auto-injectors are now commonplace, and the non-oral medication device market is still growing fast, with increasing demand for medication against cancer and long term conditions.

An industry-wide preference for injectable devices is the result of multiple benefits, including better dosage security and sterility. However, such devices pose a challenge to converters because of small diameters and low energy substrates.

Avery Dennison offers a sophisticated portfolio of labelling solutions designed specifically for small-diameter pharmaceutical containers. The range includes syringe labels for many different applications, with outstanding tight mandrel performance and a low risk of adhesive migration or edge lift.

* Only applies to adhesives S717P, S692NP

Key features

- High performance materials for small diameter medical devices
- Outstanding tight mandrel performance
- Low risk of adhesive migration or edge lift
- Avery Dennison notifies changes to adhesives 12 months in advance*
- Compliance with FDA and European food regulations

Application areas

- Auto-injector pens for diabetics, autoimmune deficiencies and more
- Pre-filled syringes and vials
