Avery Dennison Label and Packaging Materials Product Overview

Asia Pacific - South Asia July 2021

# Performance and versatility at the highest level of durable goods labeling

Overlaminate materials are important components commonly used to ensure the performance of durable goods labels. In order for the label to maintain its desired function over life of the item it's adhered to — be it identification, tracking or branding — these film materials protect printed label graphics from scuffing and fading, which in turn keeps them functional. Avery Dennison offers an extensive collection of overlaminates built for a variety of end use applications. Our portfolio includes Lexan®, clear print-treated, clear topcoated, clear UV and matte polyesters.

### **UL®** recognized

Included in the Avery Dennison Select Solutions™ Overlaminate Portfolio are UL®/ CSA recognized clear PET films that meet UL 969 requirements. These qualified overlaminates and Lexan simplify the process for a label adoption, significantly reducing the time, cost and effort of adding a product to a UL file.

### Proven functionality

Avery Dennison overlaminates have been tested in our Mentor Innovation Center to meet the requirements of a variety of environments, conditions, temperatures and OEM standards. The tests include:

Legibility

Adhesion

Defacement

- Taber Abrasion
- Chemical Exposure
- Water Resistance

Humidity

Environmental Resistance (Cold/UV)

Heat Aging

# Aesthetic versatility

In addition to functionality, our overlaminates have been chosen based on their high-performance aesthetics. The elements include:

- · A richer look that appeals to consumers
- The ability to stiffen a construction for better application alignment creating a flush, no-label look
