Meet Our Technical Excellence Team

Kanokwan Pankhet

Backed by years of experience in the industry and at Avery Dennison, Kanokwan is responsible for our Specialty business, working closely with sales, technical support, and R&D teams to develop the right products that meet the market and customer needs.

Harry Siswanto

As a Product Manager for Specialty, Harry works closely with the R&D team on developing new products while collaborating with sales and marketing teams to introduce the right solutions to the market and customers.

James Thiem

As a part of the Product Management team, James is responsible for the Durables portfolios across ASEAN, not only managing a wide range of products, but also developing the right solutions for different applications to ensure the overall industry needs are addressed.

The Select Solutions™ Services

Differentiate and grow with Select Solutions™

This catalogue provides you with insights into our application-specific product ranges, our services and capabilities. Capture your consumer's attention with label solutions that have been specifically designed for a multitude of surfaces and applications. Our Select Solutions™ portfolios offer unique and custom label solutions that can improve performance or productivity, add functionality, enhance shelf appeal or help you become more sustainable.

Achieve unique label combinations with Mix & Match™

The Select Solutions™ Mix & Match™ service gives you the support of a customised label solution with low minimum order quantities, timely pricing, and speedy delivery. Benefit from Avery Dennison's expertise in helping you find the right label solution for your specific application needs and your combination request of the face material, adhesive, and release liner. It opens up a whole new world of opportunities to innovate and differentiate.

Develop custom products with Engineered Solutions

Our Technical Excellence team, made up of some of the industry's most experienced professionals, is dedicated to helping you be the first to market with solutions meeting your clients' needs. Our technical leaders play a crucial role in uncovering the latest labeling and packaging innovation trends and broad market developments. Their expertise in components can help you in the design and manufacturing of custom solutions addressing unique challenges.

Fluorescent and Foils

Used as inventory and warning labels, as well as eye-catching advertising and promotional labels, fluorescents and foils demand attention. They not only communicate important data such as use-by dates that provide consumer confidence and safety, but they also boost immediate shelf impact. However you use them, our fluorescent and foils facestocks provide excellent stability and durability in application.

Available in a wealth of bold, bright colours, Avery Dennison Fluorescent and Foil label materials for food industry applications are as versatile as they are functional, improving supply chain visibility, waste reduction and freshness Labelling.

Available in a range of silver, bright and matte finishes, Avery Dennison Foil solutions are suitable for the labelling of quality products including cosmetics and luxury toiletries.

Key features

- Fluorescent solution available in a wealth of bold, bright colours.
- Foil solutions available in silver, bright and matte finishes.

Application areas

- Fluorescent – Promotional labels, Warning labels
- Foils – Cosmetics, Luxury Toiletries

Frozen Food

Traditionally, frozen food packaging have used sleeves to deliver large, eye-catching graphics. Pressure-sensitive labels made of rigid materials such as synthetic paper provide the structural strength to support wide prints while sticking directly to the packaging to prevent them from falling off the container.

Key features

- Suitable for all freeze conditions ranging from ambient to deep freeze
- Excellent print quality to provide attractive on-shelf appearance
- Available in hotmelt and emulsion adhesives for various application needs

Application areas

- Frozen ready-meal containers
- Refrigerated meat/fish/poultry trays

Premium Food

As consumers demand high-quality ingredients and careful preparation of food, along with deliciousness and sensual pleasure, brand owners need food packaging that emphasizes quality and provenance. With wine and craft beer, sophisticated labelling adds value by conveying a sense that what's inside is special.

Our premium food label collection offers a variety of textured and tactile materials, from a subtle and soft to fine and bold finishes, all designed to elevate the packaging and presentation of premium food products.

All materials in our premium food label collection let you create unique labels for distinctive products, including high-end chocolate, specialty coffee, marmalade and other jams and jellies, and extra virgin olive oil. For small-batch artisan foods and bigger premium brands alike, materials in this collection promise an extra delicious and pleasurable experience.

Key features

- Conveys a premium brand image at the point of sale
- Labels of various textures and appearances available including uncoated paper, holographic and metallized paper and film, and black paper
- Designed for applications that require eye-stopping shelf appeal
- Reliable performance in ice-buckets and moist conditions
- Avery Dennison's signature customer service and flexible minimum order quantities

Application areas

- Premium food and beverages
- Spirits and craft beer

Cover-up Opaque

High-opacity barrier coating, on paper or film, hides errors and covers outdated information on packaging, labels, and containers. No matter what the relabelling need, Avery Dennison's Cover-up portfolio can make it right without the high cost of repackaging, with reduced harm to the environment.

Almost every packaged product will need to have its labeling changed or adapted at some point in its life. It is crucial to ensure that any over-labelling is truly opaque. This makes the new labels fully legible and, especially for correction labels, ensures that overprinted data is hidden. Avery Dennison opaque label stocks offer label converters and their customers an unrivalled range of options in both paper and film, with permanent and removable adhesives. The range is a genuine one-stop shop for all correction applications, and the sheer quantity of choices available allows for highly creative solutions. Most paper or film products can be customised on demand to use a specific opaque colour - for example, an attractive coloured background on a clear bottle.

Key features

- Opaque prime films
- Opaque prime papers
- Opaque VI front materials
- A selection of standard colours and multiple opaque layers
- Customisable colours

Application areas

- Correction labels
- Translation labels
- Promotional labels
- Shipping and tracking labels

Holographic

Few packaging technologies can compete with holographic labels for pure shelf impact. Their dynamic, shifting patterns grab consumers' attention – a winning choice for premium product differentiation, special offers and promotional campaigns.

The premium holographic film and paper range provides optimal brightness and unbeatable shelf appeal for high value applications such as spirits and cosmetics. Polypropylene laminated to paper offers conversion-friendly packaging promotions, festive gift or home care product labelling.

Key features

- Conversion-friendly paper laminates
- Six patterns available for rapid delivery
- Wide variety of adhesives
- Full sales support in choosing new patterns

Application areas

- Cosmetic products
- Promotional or seasonal campaigns
- Wine and spirits
- Home and personal care products
- Food
- Security and pharmaceutical applications

Piggyback

For sheer flexibility, operational time saving and brand impact, Piggyback labelling is a technology hard to match. The Avery Dennison Piggyback range enables a whole spectrum of applications, from a simple shipping label through to highly decorative promotional features.

Piggyback labels are multi-layer constructions featuring one self-adhesive label on top of another. The top label can be released and can be reapplied elsewhere, while the bottom label is stationary, remaining affixed to the original surface. Dynamic and versatile, piggyback labels can be created in constructions that adhere to paper, plastics, cardboard or metals, and standard products are compatible with using all conventional printing techniques.

Key features

- Multi-layer constructions with two
- adhesive layers and release liners
- Easy automatic dispensing
- Wide variety of face materials and adhesives
- Combinations of permanent and/or removable adhesives available

Application areas

- Shipping and tracking
- Inventory management
- Promotional labels (coupons)
- Administration
- Healthcare

Wash-off

Returnable glass bottles require solutions that enhance their circularity—Labels that stay firmly in place during use but can be easily removed for a continuous reuse process. The innovative Avery Dennison Wash-Off adhesive technology has been designed to meet the growing demand for sustainability and cost optimization in the glass recycling space.

The innovative Avery Dennison Wash-Off adhesive technology has been designed to meet the growing demand for sustainability and cost optimization in the glass recycling space.

- Key features**
- Label remains firmly in place at point of sale, and during consumer use
 - Facilitates an easy, residue-free removal in a conventional bottle washer
 - Compatible with a wide variety of printing techniques including letterpress and flexo
 - Available with both filmic and paper facestocks for a wide range of designs
 - Optimized and proven for auto-bottle-washing process

- Application areas**
- Returnable glass containers
 - Beer, Spirits, Wine
 - Carbonated and non-carbonated beverages

Apparel

Avery Dennison Select Solutions Apparel portfolio gives you more pressure-sensitive options for greater opportunities with brand owners and retailers looking to differentiate their products at the store level. A range of clear and white transcode films featuring exceptional thermal transfer printability, our Apparel Portfolio provides the application flexibility you need for brand focused apparel and textile labeling.

Apparel label materials are offered with liners in various weights and thicknesses, as well as a range of adhesives designed for good adhesion to and easy removal from many fabrics, including sports performance fabrics.

For sizing strips, the Apparel portfolio's thinner material options provide greater conformability for easier folding when stacking garments on shelves.

Key features

- A range of clear, white and natural-looking materials
- A range of liner materials in various weights and thicknesses
- Adhesives specifically designed for application to and easy removal from fabrics without residue

Application areas

- Apparel – jeans, pants, sportswear, menswear, children's wear, socks, shoes, sweaters
- Textiles – blankets and bedding

Pharmaceutical Cold Chain Labelling

Avery Dennison Cold Chain Portfolio offer materials that perform at the lowest application temperature available, specifically designed to hold during cryogenic and other low-temperature transportation and storage. Our facestocks remain legible under equally harsh conditions, including low temperatures, warm-water bath (bain marie), sterilization, treatment with chemical disinfectants, liquid nitrogen and dry ice, scalding water, and more.

Key features

- Dependable adhesion in temperatures ranging from -50°C to -196°C
- Compatible with a variety of different printing technologies
- Compliant with all applicable U.S. and European regulations
- Available in clear and white facestocks

Application areas

- Hospital lab samples
- Biobanking and blood bags
- Vaccines and medications

Ethical & Over-the-Counter Pharmaceutical

As a vital part of pharmaceutical packaging, we are fully aware that labels must comply with global and local regulations, depending on the market in which they are sold and consumed. Our materials are in compliance with all applicable regulations, including European food regulation (1935/2004/EC), U.S. FDA regulations, and REACH. Our dedicated pharma adhesives* meet the requirements of ISO 10993-5.

* Applicable to S2000NP, S692NP, S717P, S799P

Key features

- Compliance with pharma specific regulations
- Adhesives covered by change management
- Paper materials from FSC certified sources

Application areas

- Curved containers, cardboard boxes, and glass
- Hanging labels
- Security labels for cardboard boxes

Removables

Choosing the right removable adhesive may be tricky due to the complexity of the interaction between the adhesive and the substrate.

However, the right removable solution can greatly enhance consumer experience, which makes the challenge worth taking. Avery Dennison offers a highly comprehensive portfolio of removable solutions and can help you find the one that does the job.

Key features

- A range of general purpose and application-specific adhesives that address various needs
- A plethora of performance information to help you select the best adhesive for your needs
- Solutions that help speed up time to market— reasonable price, low MOQ, fast quotes and reliable shipping

Application areas

- Promotional and retail
- Windows
- Textiles
- Logistics

Wet Wipes Reclosure

For a solution to keep wet wipes moist and effective in a flexible packaging, Avery Dennison reclosure labels can do the job. Their tight barrier keeps the content safe from contamination while supporting consistent opening and closure. Our labels also follow the latest sustainability regulations, making it safe to use even for baby wipes.

The adhesive is at the core of successful reclosure technology. It plays an essential role in keeping the label effective during its use by providing a reliable seal that keeps the wipes away from external factors, retaining their condition. All the while, it must provide an unchanging opening and closing experience throughout the use of the product.

Avery Dennison offers a proven range of adhesives designed to ensure performance in baby, cosmetic, toilet and domestic products that can even handle contact with solvents, oils and chemicals. Our experts are here to help you choose the right adhesive for your specific application needs.

Key features

- Labels that can be opened and resealed as many times as needed
- A range of solvent based adhesive with varying degrees of chemical and moisture resistance
- AD TruKleen™ – A new solvent free adhesive that emits lower VOCs than traditional reclosure adhesives

Application areas

- Wet wipes, including baby wipes, refreshing wipes, antibacterial and disinfectant wipes

Water-based Inkjet

For many businesses, printing labels on a water-based inkjet printer is a smart move. Labels can be printed on demand, in shorter runs, with a relatively low capital investment. The key to consistently great-looking labels is to use materials already optimized for the water-based inkjet process. Our comprehensive portfolio of pre-optimized materials lets you choose from an exceptionally broad range of materials that are perfect for segments as diverse as food, home and personal care, beer and beverage, and more.

Key features

- Consistent print quality materials
- Broad range of materials.
- High ink hold out and quick drying properties

Application areas

- Wine and spirits
- Food
- Home and personal care
- Reclosures and removables
- Chemicals
- Logistics and transportation

HP Indigo

Printing labels with HP Indigo technology requires adding a topcoat to your materials. However, priming materials can be challenging, especially with materials that have special finishes or textures. Pre-priming materials is the best way to ensure uniformity of the topcoat on the substrate and preserve color accuracy.

The wide variety of materials in our HP Indigo Portfolio are pre-primed in our manufacturing facilities, ensuring uniform application, higher color accuracy and optimal performance — plus all the advantages that come with printing on HP Indigo presses and digital printers.

Key features

- Variety of film materials to cater for different shelf appeal
- Pre-primed facestock material, ensuring uniform application, hence more consistent color transfer.
- Reliable and optimal performance

Application areas

- Wine and spirits
- Food
- Home and personal care
- Reclosures and removables
- General purpose

Tamper Evident

The Avery Dennison Tamper Evident portfolio increases awareness among end users about brand protection and security issues. It suits a wide range of applications, resists tampering at all stages of end users' supply chain. Avery Dennison can help you choose the right security products and applications that work for you and your customers. Our Technical Excellence Team is here to help with converting and application troubleshooting.

Key features

- Compatible with standard press printing and thermal transfer
- Customisable void text and colour with competitive price and flexible MOQ
- Films destructible upon removal from substrate
- RoHS compliance film available
- Available in clear and white facestock

Application areas

- Security label

Inline Labelling

Freshly in-moulded HDPE or LDPE bottles can be a challenge when it comes to labelling as substrate temperature is relatively high and the bottles have not returned to its steady state. Our In-line Labelling portfolio is engineered for hot-filling labelling applications, delivered in a variety of well-performing adhesive and facestock combinations.

Avery Dennison's high-tack S477A acrylic emulsion adhesive is designed to hold tight at temperatures of 80°C to 90°C, even on low surface-energy materials like HDPE. S477A expands along with the container during hot filling, preventing pleats, wrinkles, tunnels, bubbles and edge lifts. Designed with sustainability in mind, S477A contains 30% renewable materials and is APEO-free.

Choose a facestock that prints beautifully, holds up to in-line dispensing and delivers maximum shelf appeal. We offer many options to choose from, including our PE, rPP and Gloss Plus paper products.

Key features

- Contains 30% renewable materials
- Specially engineered for strong adhesion on hot fill containers with low surface energy during in-line labelling
- Expands along with container during hot-filling
- APEO-free

Application areas

- Freshly blow-moulded and hot filled containers.
- Lubricant
- Dairy
- Detergent

Chemical Drum

Avery Dennison drum label materials are designed to perform in extreme labelling environments. They handle heat, cold, rain, snow and salt water. Consistent printability and readability are ensured over the transportation of a drum, through all climate or environmental changes. Drum labels are typically large, and the portfolio suits application by hand. Materials have high dimensional stability and can meet BS 5609 Marine Test standards for seawater resistance and durability. Grades are available for UV flexo, thermal transfer and laser printing. A new grade is also available suitable for water-based Inkjet printing, which facilitates GHS compliance for smaller quantities and on-location printing.

Key features

- Large and small labels
- Matt coated filmic grades for superior performance
- Special polyethylene and polypropylene grades for laser applications
- Special grade for water-based Inkjet

Application areas

- Chemical drums and containers
- Point-of-use labels printed on-site at manufacturing and shipping locations
- Labels facing extreme conditions

Automotive

Labels for the automotive segment have to cope with a range of challenges – harsh chemical environments, challenging substrates and the stresses imposed by vehicle wear and tear. The Select Solutions Automotive portfolio contains materials with proven performance in the most extreme environments, meeting the needs of all supply chain processes, industry regulations and OEM testing parameters.

Key features

- Full range of self-adhesive materials, including multiple facestocks and adhesives
- Excellent adhesion to a wide range of substrates, including rough and low surface energy plastics
- High temperature and chemical resistance
- Durable performance in harsh environments
- Compliant with REACH, RoHS, IMDS and common testing parameters specified by automotive OEMs

Application areas

- Exterior: Fuel cap, tire pressure and tracking/ service labels
- Interior: Airbag, security/anti-counterfeit, warning, instruction and tracking labels
- Under-the-hood: Labels for heat/chemical-resistant warnings, engine component instructions, tracking, fluid containers, car batteries and cables

Sun Visor

Avery Dennison’s innovative sun visor labelling solutions offer irreversible adhesion to challenging substrates such as PVC, ABS, PC, and automotive textiles. They’re specially engineered, also suitable for dashboards and and mirror cases.

After labelling the textile and applying heat and pressure, the adhesive flows into the structure of the substrate and crosslinks, creating an irreversible structural bond. Labels feature high resistance to extreme temperatures, chemicals and humidity.

Using a simple heat press, our labels can be applied within seconds with no specific skills needed during production or maintenance. Before heat activation, labels are repositionable.

Product information

Technical Textiles

Avery Dennison's innovative technical textile labelling solutions offer irreversible adhesion to challenging substrates such as woven and non-woven textiles and fabrics used in automotive and industrial applications.

After labelling the textile and applying heat and pressure, the adhesive flows into the structure of the substrate and crosslinks, creating an irreversible structural bond. Labels feature high resistance to extreme temperatures, chemicals and humidity.

Using a simple heat press, our labels can be applied within seconds with no specific skills needed during production or maintenance. Before heat activation, labels are repositionable. The adhesive S8073 can be coated via our Mix and Match program onto a variety of films, creating customized label solutions. Labels can be printed in all printing technologies, including variable imprinting using thermal transfer ribbons. The format and size of labels can be chosen according to your needs.

- Outdoor & sports – sunblinds, party tents, jumping castles, suits

Laser Etch Marking

Avery Dennison offers laser etch marking solutions with excellent durability suitable for use in automotive, micromobility, industrial and pharmaceutical applications. Our solutions feature a white heat-stabilised polyester film with a black laser-etchable coating for the labelling of durable goods.

Our solutions are tested to ensure reliability in the most extreme conditions — to withstand mechanical abrasion, heat aging, chemicals including acetone and gasoline, weathering, laser etching and fuming.

Tire Point-of-Purchase

Proper tire labeling demands materials made for the job. A tire's uneven treads, combined with the low surface energy of rubber, makes adhesion a challenge. Face materials have to stand up to oil migration to prevent unsightly staining. And to communicate key information and make brand logos look great—excellent printability is essential.

TS79, our rubber-based hotmelt adhesive for tire labels, has always been designed for the job. We enhanced the adhesive to TS79N so that it offers approximately 20% more adhesion and loop tack¹ than the original version. You can be confident your labels will stick with the tire for its entire journey, from manufacturing to shelf with no curling on the way.

Special components help ensure that our POP tire label constructions consistently print great and look great. A premium top coating ensures high quality printing via conventional and thermal transfer methods. An optional overlamine is available, too. Designed with a special barrier, it prevents oil migration and staining consequently protecting the prints. We offer Pattern Gum adhesive, along with a special adhesive formulation to prevent unsightly oozing.

Whether you're using UPC, QR codes, or the game-changing capabilities of RFID, our labels materials are designed for the job. Their crisp, clean printability enhances code readability.

¹ Results are based on evaluation and do not constitute a guarantee or warranty. Further testing is always recommended to determine its suitability.

Key features

- Excellent printability for readable information and best presentation of brand identity
- Durable thermal transfer printability perfect solution for tracking and tracing applications that improve supply chain and logistics management
- Controlled ooze performance designed for challenging applications
- Facestock comes with back barrier coating on the adhesive side to prevent rubber migration over time
- Double silicone adhesive for easier labeling dispensing during application process
- CCK80 and P140 liners enables improved label layflatness in sheet converting

Application areas

- Tire Branding labels
- Tire Rating labels
- Tire Logistic labels
- RFID labels and other logistics and supply chain solutions for tires

Overlaminates

Overlamine materials are important components commonly used to ensure the performance of durable goods labels. In order for the label to maintain its desired function over life of the item it's adhered to — be it identification, tracking or branding — these film materials protect printed label graphics from scuffing and fading, which in turn keeps them functional. Avery Dennison offers an extensive collection of overlaminates built for a variety of end use applications. Our portfolio includes Lexan®, clear print-treated, clear topcoated, clear UV and matte polyesters.

Key features

- UL® and c-UL® recognized
- Proven resistance to water, UV, chemical, high and low temperature
- Rich look that appeals to customer

Application areas

- Over printed label graphics

Durables General Purpose

Introducing the Durables NextGen portfolio, Avery Dennison now offers a range of more competitive PET products that come in a wide variety of choices including thickness, color, and adhesion that are suitable from low to medium/high volume general application projects such as product labeling, asset tagging, and instruction labeling, where good performance and affordability are key.

On top of its competitiveness, the NextGen product range delivers performance in printability, heat resistance and tear resistance that are found in the polyester based label materials in our standard range.

With the new Durables NextGen in place, you now have access to a complete set of solutions to address your varying needs — ranging from the most stringent applications requiring UL certification, down to the very fundamental labeling

Key features

- Excellent top coating layer suitable for most conventional presses, e.g., UV letterpress, Flexographic
- Excellent thermal transfer printability with the right choice of industrial ribbon
- Emulsion, solvent, and hotmelt based adhesives featuring various adhesion for different surfaces and application environments

Application areas

- Electronics parts
- White goods products
- Promotional and work-in-progress labels
- Asset tagging
- Applications requiring heat and chemical resistance

Industrial

The Avery Dennison Industrial Portfolio gives you the performance you need for price-sensitive durables applications. It suits a wide range of substrates, including those used in domestic appliances, electronics and industrial goods.

Avery Dennison can help you to choose the right facestock/adhesive combination for any application – including both white and silver labels. Both A4 and roll samples are available for trial.

Key features

- Cost effective durable goods applications
- White PET, silver PET and white PP facestocks
- Compatible with standard pressing printing and thermal transfer
- High performance, all substrates permanent adhesive
- Broad application window
- Greater performance due to excellent adhesive performance on a wide range of substrates
- Suitable for rough, LSE-MSE-HSE substrates and applications
- Competitive pricing, suited for value-driven projects
- Reliable product performance, including for non-UL recognised applications

Application areas

- Domestic appliances
- Electronics
- Industrial goods

Heavy Industrial

Applying tracking information onto raw materials such as metals, timber, stones and other building materials can be done in many ways - including conventional solutions, the use of hanging tags and as well as adhesive labels. Conventional solutions include handwriting, riveting or welding plates onto parts. Materials can be rough, dusty or oily, and at times high in temperature during label application making it difficult to apply.

The Avery Dennison Heavy Industrial Labeling range allows label converters to offer a highly effective alternative labeling solution. It ensures traceability throughout the manufacturing process. Materials for conversion into both hanging tags and adhesive labels are also available, covering different temperature ranges. Labels and hanging tags applied at ambient temperatures can use cost effective solutions based on polyolefins. For peak temperatures up to +220°C, a heat stabilized polyester Film solution is available. Topcoated Polyimide films, featuring high abrasion and solvent resistance for thermal transfer print, can be used at temperatures up to +580°C. Avery Dennison possesses a strong R&D team that develops and provides suitable solutions for the Heavy Industry.

Key features

- Products designed for different temperature ranging from 70°C to 580°C
- Wide range of portfolio inclusive PE, PET and PI to accommodate different application needs
- Performs in extreme conditions
- Available in tag or label form

Application areas

- Metal processing
- Building material industry
- Timber industry
- Manufacturing

Hard Disk Polyimide

Printed circuit boards (PCBs) are found inside every electronic device, used to hold and connect electronic components. Reliable tracking is required during production, and labels must survive exposure to extreme heat (up to 280°C) and cleaning agents. Avery Dennison polyimide label constructions are specially designed to maintain their physical integrity, and their high-performance heat-resistant topcoats ensure dependable legibility. Minimising costs depends on finding a good match between application requirements and label performance, and Avery Dennison offers a complete polyimide portfolio.

Key features

- Materials tolerate peak soldering temperatures (up to 300°C)
- Resistant to PCB cleaning agents
- Options for different temperature profiles and cleaning processes
- Meets all PCB labelling requirements

Application areas

- PCB labelling before wave soldering/reflow process
- Computers, IT peripherals, telecommunications and consumer electronics
- Industrial and medical devices
- Automotive, aerospace and military components

Air Egress

Label appearance can be impacted by wrinkles and bubbles, distorting the finish and spoiling the end result. This can be a particular issue for injection-molded plastics, such as PC and ABS, commonly used in the durable goods segment. Injection molded materials can also contain volatile elements that can diffuse at elevated temperatures above 40°C and cause an ‘outgassing’ phenomenon. This phenomenon, as well as entrapped air during label application, can contribute to undesired bubble formation under the label material.

The conventional way to deal with bubbles under labels is to perforate the label surface to release trapped air, but this leaves undesirable holes in labels. Another method involves repeatedly reapplying the label, however this makes it more likely an applied label will be misaligned.

Avery Dennison Air Egress technology uses a micro-embossed texture to create a nearly flawless, even finish. The textured adhesive creates a complex grid and allows trapped air to escape while the label is being applied.

Key features

- Textured adhesive allows trapped air to escape while label is being applied
- Enables eye catching designs over large labels without unsightly wrinkles and bubbles
- Suitable for labels applied on injection molded plastics

Application areas

- PCB labelling before wave soldering/reflow process
- Computers, IT peripherals, telecommunications and consumer electronics
- Industrial and medical devices
- Automotive, aerospace and military components

Cable Labels

Keeping track of cables in cabinets, workstations and offices is essential when installing, repairing or troubleshooting. Reliable part identification and branding depend on good printability, usually with thermal transfer printers and ribbons. Smaller diameter cables need more flexible films and higher performance adhesives. Avery Dennison materials minimize ‘butterflying’ by combining a flexible film with a high cohesion, high shear adhesive.

Key features

- Good printability
- Good resistance to ‘butterflying’
- High performance adhesive and flexible facestock
- UL-recognised, flame retardant and UV-resistant options
- White, highly flexible materials for flag labels
- Transparent, highly flexible materials for wrap around solutions

Application areas

- Supports wide range of cable applications
- Flag labels with space for text/barcodes
- Wrap-around labels where space is limited

Who we are

As the pioneer in the pressure-sensitive industry, we bring one-of-a-kind capabilities to sustainable labelling. We combine decades of innovation with deep knowledge of both regulatory and legal requirements. We know about the real-world conditions in which our labels must perform and the technical challenges they have to meet. Whatever your product, wherever it's going, we can help you develop a sustainable label that performs.

What we stand for

Sustainability. Innovation. Quality. Service.

In 1935, we invented the first self-adhesive label, and we've never looked back. With each passing decade, our innovations have further shaped our industry by lifting the limits on what labels can do. The world's most successful brands know that innovation and evolution are the lifeblood of longevity and success. We're proud to help our clients continually expand the boundaries of what's possible.

Work with us

You're the expert in your business; we're the expert in labelling. Contact your local Avery Dennison representative today or visit label.averydennison.com to find out how we can meet and exceed your needs.
