

Lower impact, same excellent performance.

Discover PP made from recycled
pre-consumer content

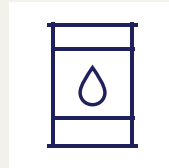

Our mechanically recycled rPP films are high performing label solutions that help reduce the environmental impact of rigid plastic packaging. They're sourced from high quality pre-consumer waste, so they deliver performance and appearance similar to virgin PP, as well as an improved sustainability profile. They're also an affordable alternative to other recycling options, with a shorter waste cycle and lower carbon footprint.

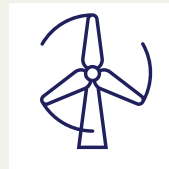

Mechanically recycled PP:

- Contains 30% mechanically recycled pre-consumer content
- Has properties and appearance similar to conventional PP
- Complies with existing legislation around recycled content in packaging
