

Lubricant and oil can solutions

Product overview

Lubricant and oil cans pose major labelling challenges, thanks to oily, aggressive and possibly hazardous contents as well as textured container surfaces. All of these factors make adhesion difficult.

Brand owners want bottles to attract consumers - often using high quality gold/silver labels - so pleating, bubbling, and scuffing must be avoided. Containers must also survive storage outside on forecourts, so water resistance is important.

The Avery Dennison S277-based portfolio supports high-speed labelling, and labels can be applied immediately after blow molding of the containers - a point where surface energy is extremely low and adhesion is difficult. The materials also resist bubble formation from outgassing. The S477-based products have been developed to support label application on the filling line (hot-fill process). They allow containers to expand and contract during hot filling without causing pleats and wrinkles.

Key features

- ▶ Can be applied immediately after container production or on filling lines
- ▶ Adhesives perform well on low energy surfaces
- ▶ Avoids pleats and wrinkles from container expansion/contraction
- ▶ Excellent service, including EXACT service on dedicated grades

Application areas

- ▶ Lubricant bottles
- ▶ Oil cans
- ▶ Brake fluid containers
- ▶ Cooling fluid containers
- ▶ Other hot-fill applications, such as food
