

Lubricant and oil can solutions

Fuel your business

Lubricant and oil cans pose major labelling challenges. Ingredients are oily, aggressive and possibly hazardous, and container surfaces can make adhesion difficult.

The oil-filling process also takes place at elevated temperatures, so containers expand and contract, putting strain on the label material – and optimal brand appeal depends on avoiding pleats and bubbles.

Dedicated Avery Dennison S277 and S477 adhesives perform well under the most demanding labelling conditions. They cope with rough, smooth, HDPE or metal surfaces, and can resist very significant environmental pressures. S277 is recommended for label application straight after container blow moulding, and S477 suits applications where labels are applied on the filling line.

All products are suitable for reliable automatic label application, and also excellent shelf appeal using a wide variety of gloss or silver facestocks.

KEY FEATURES

- > Can be applied immediately after production of containers, or on filling lines
- > Adhesives perform well on low energy surfaces
- > Avoids pleats and wrinkles cause by container expansion and contraction
- > High visual impact and shelf appeal

APPLICATION AREAS

- > Lubricant bottles
- > Oil cans
- > Brake fluid containers
- > Cooling fluid containers
